

## SLOPED ROOFS

### GLAZED ROOF

As sloped element has been used truss made of metallic profiles; over them, lacquered aluminum frame and double glazing has been placed. They are made of two windows panes of 6 mm. thickness and ventilated area of 12 mm. thickness into an aluminum profile with a glazing bead of the same material to make sure the sealing.

On the left zone, you can see the finished off the roof with an aluminum strip jointed, through a metallic anchor, to the profile which hangs the glass strip. You can see the gutter along the roof, made of lacquered aluminum.
