

SLOPED ROOFS

SLATE ROOF (over a plaster coat)

As sloped elements have been used light trusses made of galvanized steel profiles.

The purlins are omega profiles, between them, ceramic bricks deck are placed. Over them, spread a plaster coat, in which are nailed the slate tiles, as covering element.

It can see the detail of the finish off the front of the slab, made of an exterior plastering spread to a metallic mesh; finishing off all the set ...
