

## LIGHT ENCLOSURES

### PREFABRICATED SANDWICH PANELS ENCLOSURE

The sandwich panels are made of two lacquered steel sheets. They are white in exterior face and they have polyurethane foam inside them.

This insulation is waterproof, so that, it doesn't damage when there are humidity.

The vertical joints among the panels are formed with a PVC profile that facilitates the double tongue and groove.

The panels are joined to the metallic structure (metallic tubes on this case) through screwed auxiliary pieces and hidden pieces.

One of the panels has a double glassed fixed window. The edge side of a panel has been finished with a U aluminum profile and the corner is made of a curved panel.
